

SWC-ROUND

Universal push-button remote control

The remote control module (SWC-ROUND) is an electronic device consisting of a receiver unit and two wireless buttons. The two separate push-button units are powered by an internal non-rechargeable but long-life lithium battery, ensuring prolonged use. The two devices each manage 5 functions and can be programmed to offer customised control of the various features of radio devices with a resistive learning system.

Button A: Volume +, / Volume - / Mute / Previous search / Next search

Button B: GPS navigation / Answer phone / Hang up phone / Mode / Other
